KATYA PEER

DevOps Engineer

INTRO

DevOps Engineer with hands-on experience in CI/CD, Infrastructure as Code, cloud platforms, Kubernetes, automation, and SRE practices. Fast learner with a strong ability to dive into new technologies and solve complex technical challenges. Team-oriented and collaborative, with strong experience using AI-assisted tools to improve troubleshooting, automation, research, and engineering workflows.

EXPERIENCE

DevOps Engineer, 2022-present

Tricky Tech

DevOps Engineer providing SRE, CI/CD, Infrastructure-as-Code, and platform automation services across multiple client projects and environments.
Worked closely with client development and operations teams to achieve shared technical goals, adapting to different architectures, cloud platforms, tools, and operational models.
The role required a highly adaptable and open-minded approach, as each client had different technologies, infrastructure, and evolving requirements. I was expected to quickly understand unfamiliar environments, learn new technologies, and integrate solutions effectively.
Strong interpersonal and communication skills were essential, allowing me to collaborate with diverse teams, integrate smoothly into different organizational environments, and support projects from implementation through production.

Information Technology Manager, 2017-2022

Guberman Group

Managed the organization's IT operations, including networks, systems, software licensing, security, technical support, and day-to-day infrastructure reliability.
Led troubleshooting, system maintenance, audits, upgrades, migrations, and improvement initiatives across business-critical IT systems, while supporting users and resolving hardware, software, and network issues.
Managed and trained employees, coordinated major IT projects, and worked with senior management to plan system changes, improve operational processes, and maintain a secure and stable IT environment.
